

A biomarker corporation, “the corporation”, based in Los Angeles, CA seeks a Chief Executive Officer.

Background:

- The corporation is a start-up GLP compliant laboratory performing ELISA assays to monitor patients with multiple myeloma and B-cell malignancies. We will obtain CLIA certification in the first half of 2018.
- We have a proprietary platform surrounding BCMA serum/plasma testing. We have IP in both diagnostics and therapeutics and in late 2017, we completed a licensing agreement involving anti-BCMA treatment and CAR T-cells.
- We have performed GLP testing for major pharma/biotech companies and are in discussion with several others for new studies to be performed in 2018.
- We are looking for a dynamic leader to take on the CEO role and help to continue to foster a culture of innovation while guiding our current team towards growth and expansion.

Job Qualifications/Description:

- This position requires business experience in laboratory management, oncology or malignant hematology research specifically related to development of diagnostic products in these areas. Senior management experience in pharma, biotech, or CLIA/GLP Laboratory of 3-5 years is required.
- Start-up experience, particularly in biomarker research or diagnostics related to cancer, is highly desired.
- Federal grant development and management is a plus.
- Understanding of oncology laboratory testing, experience in business development, history of IP licensing or partnership experience is important for this position.
- Domestic and International travel will be required. A strong background in development and implementation with experience in strategic planning is essential. The ability to organize external key opinion leaders to assist company in meeting its yearly goals is required.

Interested applicants should send Resumes/CVs to scbc@socalbio.org
