

Job listing:

**SCIENTISTS IN
STEM CELLS BIOLOGY - CELL & GENE THERAPY**

Zebra Pharma is a stealth-mode, early-stage, venture-backed biotech company focusing on a novel therapeutics concept in oncology. We are a team of scientists and clinicians who are working on a disruptive technology, with the financial backing of one of the biggest biotech investors in the US.

Currently, we are seeking to grow our team of highly motivated scientists who want to work in a fast-paced start-up environment to make an impact. We're currently looking to expand our team expertise in the following areas:

- **Stem Cells and iPSCs**
- **Extracellular Vesicles**
- **Cell & Gene Therapy**

If you have expertise in at least **ONE** of those areas, let's chat!

Job Summary:

- Full time position
- Salary: negotiable
- Location: San Francisco, New York, or Los Angeles

Desirable Qualifications:

- Ph.D. in Molecular Biology, Cell Biology or Bioengineering or relevant field
- Expertise in human stem cells, extracellular vesicle biology, cell & gene therapy
- Experience with human pluripotent stem cell culture, characterization, QC, and differentiation
- Experience with gene-editing technology such as viral transduction or CRISPR
- Hands-on experience with various cell-based and molecular biology technologies
- Demonstrated ability to work in a dynamic environment as a team player with a strong work ethic, excellent communication, and time management skills
- Eligible to work in the US

We look for talents to build an innovative team, regardless of prestige or qualifications. Even if you don't fit exactly the description but are highly motivated and interested in joining our growing team, let's connect!
